DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 11-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ernest.

Ernest (Abstract; col. 2, lines 10-15; col. 3, lines 5-16, 39-45) substantially discloses applicant's invention as recited by instant claims 11-16, except for the specific use of a reservoir to supply water to the humidifier. Ernest does, however, teach the connection of a household water supply line to the humidifier through a solenoid valve, which controls flow of the water to the humidifier. Ernest also teaches that a switch assembly, which closes the solenoid valve also controls the delayed (15 seconds) shutoff of the fan so as to eliminate excess moisture within the humidifier ductwork, thereby avoiding microorganism growth therein. Applicant should also note that a solenoid switch means as utilized by the reference is an electro-mechanical device,

thereby meeting the limitations of dependent claims 15 and 16. It would have been obvious to an artisan at the time of the invention, to substitute a valved reservoir for the valved water supply line of Ernest, if such were desired, since the use of a reservoir rather than a straight connection to the household water lines would provide a convenient means for collecting any impurities that may exist in the water supply, said impurities being easily removable from the reservoir during routine maintenance of the device.

Allowable Subject Matter

4. Claims 1-10 are allowed over the prior art of record since such art fails to disclose or suggest the combination of the valve and dry-out mechanism within a humidifier device that includes two separate reservoir structures in series.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
